[rettangels@comcast.net](mailto:rettangels@comcast.net)

Silent Auction donations also appreciated!!

Rett Syndrome is a devastating neurodevelopmental disorder affecting approx. 1 in 15,000 births, mostly girls. Early development appears normal, but between 6 - 18 months there is a delay or regression. Speech, hand skills and coordination are particularly affected. While there's currently no cure, **recent research with mice has shown that symptoms of RS can be reversed.** Please join us at this critical time in finding a cure for Rett Syndrome, which is widely regarded as the Rosetta Stone of neurological mysteries ranging from autism to schizophrenia. Your contributions to the International Rett Syndrome Foundation (IRSF), a 501(c)(3) nonprofit group, are tax-deductible. Go to [www.rett Syndrome.org](http://www.rett Syndrome.org) for more info.
