## About Rett Syndrome

Rett Syndrome is a heartbreaking neurological disorder diagnosed almost exclusively in little girls. After a normal infancy, the baby girl with Rett Syndrome loses the skills she had acquired, and faces a future most often governed by wheelchairs, feeding tubes, seizures, scoliosis, digestive dysfunction, and total dependence in all areas of her life. Rett Syndrome occurs spontaneously in approximately one of every 10,000 female births. It can strike any family.

## About IRSF

IRSF is the world's leading private funder of Rett research. The organization was recently formed by a merger of the Rett Syndrome Research Foundation and the International Rett Syndrome Association. The combined organization is devoted to finding treatments and a cure for Rett Syndrome as well as to provide family support services and resources.

Your donations have helped a recent study that shows that Rett Syndrome is reversible.

A cure is within reach!!
