

## Spending Time Ending Rett

Welcome to "Spending Time Ending Rett" 2012

Welcome to the Spending Time Ending Rett" website. Rett syndrome is a rare genetic disorder that occurs in about 1 out of 10,000 babies, generally girls. These babies develop normally until about age 18 months, then their developmental progression starts to reverse. "Spending Time Ending Rett" is a weekend fundraiser, which donates all proceeds to the International Rett Syndrome Foundation (IRSF), a non-profit organization with the mission of funding research and finding a cure for Rett syndrome.

Our fundraiser, hosted by Kevin Black, has something for everyone: a strollathon, a concert featuring Texas singer/songwriters Kevin and Coleton Black, Jamie Richards and the legendary Gary P. Nunn. So have a look around the site, and come and spend some time with us...
